

SEBASTIAN BŁAŻEJewski

FRONTEND DEVELOPER

I've been creating web and mobile apps for years – currently with React Native. At the moment I'm working with a Middle Eastern bank, fully synced with their Arabic work week and time zone, drawing on earlier experience in the region. I'm easygoing, highly adaptable, and know when to keep things light and when to stay fully focused – *let's connect!*

EDUCATION

Wrocław University of Science and Technology

Bachelor of Mechanical and Energy Department - Aircraft Engineering

Oct 2012 - Feb 2017

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3, TypeScript

Frameworks/Libraries: React Native, Angular 14+, Vue.js, Expo, Next.js, NgRx, RxJs, Jest, Bootstrap, Tailwind CSS, Node.js, Express.js

Tools & Technologies: Git, Webpack, npm, Visual Studio Code, WebStorm

Other Skills: Agile methodologies, Bitbucket, GitHub, GitLab, Jira, Confluence, Citrix, WordPress, Adobe Photoshop & After Effects

LANGUAGES

Polish - native, English - B2/C1

HOBBIES

Cryptocurrency, Graffiti, E-sports, AI

WORK EXPERIENCE

Efigence

Mobile Developer - 06/2025 - Present

I am currently building a mobile application for Riyadh Bank using **React Native** with **TypeScript**, working with **Xcode** and **Android Studio**.

I implement UI flows such as dashboards, customizable widgets, onboarding, and personalization screens using **Redux** and the bank's design system to ensure consistency in behavior and visuals. I integrate frontend features with backend **APIs**, handling loading states and errors. I configure and use **CI/CD** pipelines to generate test builds and deliver them to QA, and participate in the feature delivery lifecycle, including merging changes into shared branches as part of production releases.

In addition, I contribute to improving the existing codebase by revamping and relocating components to enhance maintainability and scalability. I also work with **CMS**-driven content such as feature flags and translations to support dynamic configuration of the application.

Atos/Eviden

Frontend Developer - 2/2021 - 06/2025

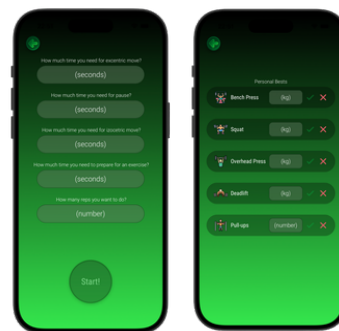

I worked on a car web app for Volkswagen group, using **Angular 14+** with **TypeScript**. This involved using a **Target Simulator** and **RSI Data Tool** - SDK, which is essential for this app development. I used **NgRx** and **RxJs** to managed the app's data and **JEST** for testing.

SIDE PROJECTS

TRAINING TOOLS

Training Tools helps you stay on top of everyday workouts and habits. You can time sets, track water intake, compare progress photos, write notes and set goals, with light/dark themes and EN/PL support. I migrated it from an earlier **Angular/Ionic** app to a fully native **React Native** build for better performance. The focus is a fast, mobile-first experience that's easy to use on the go. - Available on the App Store.

WHOPAYS?!

Who Pays?! was created in response to a common issue — splitting the bill at restaurants when paying separately is impossible. This app/game offers a fun solution: users can pick a theme, place their fingers on the screen, and a random "picker" animation decides who pays. It's built with **React Native** and **Expo**, features **Lottie** animations, and has a fully custom design.
